MANUAL FULL VERSION of HENRY FX SYSTEMS

Wellcome to Profits World in Forex 😊

All of this EA used for 5 or 6 digit brokers

EXPERT ADVISORS :

DHIKA-EA

Please put the Dhika-EA to :

C:/programfiles/metatrader/expert

This EA no need any indicator to trade, only 1 file EA and run.

Deposit Rule,

DHikaEA need min \$1.000 for start with Mini/Micro Account, Lverage more than 1:200, better 1:500. Dhika_FX Expert Advisors Parameters explanation with deposit \$1000, on EURGBP,

TimeFrame M5:

```
Risk = 0.5          // 0,5= Conservative, 1=aggressive, 1,5=Ultimate
lot = 0.05         // Lot use for start position.
Micro = true       // "True" if your acc is Micro & mini, "False" if your acc is Standart
MA_Period = 14    // Detection of trend using Moving Average periode 14.
Multiplier = 1.8  // martingale set, 1.8 is better than 2.0 (double)...less your margin.
Step1 = 5         // Grid step for open next position in first range step.
TP_set1 = 10     // Target Point on Grid step 1
Step2 = 10       // Grid step for open next position in second range step.
TP_set2 = 20     // Target Point on Grid Step 2
Step3 = 20       // Grid step for Open Next Position in thrid range step
TP_set3 = 30     // Target Point on Grid Step 4
Step3 = 40       // Grid step for Open Next Position in thrid range step
TP_set3 = 40     // Target Point on Grid Step 4
Max Step1 = 2    // Open Position with Grid Step 1 are 4 position.
Max Step2 = 3    // Open Position with Grid Step 2 are 4 position.
Max Step3 = 4    // Open Position with Grid Step 2 are 4 position.
MaxOrder = 11   // Maximum Open Position
```

The Strategy of this EA,

When DhikaFX activated, it will open 2 position of pending order using MA-14 as trend detection, then after one position touch, it will open First Position with Lot (0.01 = default). If the pair get wrong trend as 25 pips (step1 = default), it will open secong position with lot2 (0,01 *1.8 = 0.02)....etc this position only open 4 position if wrong move 100 pips (step1 = 25 and Max Step1 = 4).

Full Version Collection of HENRYFX-Secret

Then the Fifth Position will use step =50 pips...so this position will have 150 pips range,...with this, the pair had wrong move about (25 pips x 4 position) + (50 pips x 4 position) = 300 pips. With 300 pips wrong move, it will open only 8 level/position.

Then the nine'th position will open after next step = 100 pips...etc with no max order with this Step3. When the Last Position hit TP...it will CLOSE ALL....so DhikaFX will no need STOP LOSS.

Pairs = EURGBP.....(recomended for Low Setting Profits).

You can use this EA for every pairs...but recomended to use only 1 pair (EURGBP).

TimeFrame = M5 (5 Minutes) for EURGBP

Use Virtual Private Server (VPS) for maximum performance trading with this EA.

Big News...??? No Problem.

If Any problem, please email us at henry_waluyo@yahoo.com

EXPERT ADVISORS :

SMART – MFX

Please put the EA to :

C:/programfiles/metatrader/expert

This EA need indicator to trade,

Copy file supportandResistance.ex4 c:\program files\MT4\expert\indicators

Deposit Rule,

DHikaEA need min \$1.000 for start with Mini/Micro Account, Laverage more than 1:200, better 1:500. Dhika_FX Expert Advisors Parameters explanation with deposit \$1.000,

TimeFrame M5

Pairs :

GBP/USD or

USD/JPY

Parameters :

TakeProfit = 20.0; // Target per positions

Lots = 0.1; // Lot to start

StopLoss = 1000.0; // Stop loss to close for each position

TrailingStop = 0.2; // Trailing stop for each position

MaxTrades = 10; // Maximum Open Position

Pips = 25; // Step point to open next position

SecureProfit = 2; // protection of pips

StartYear = 2007; // Start for Back test

StartMonth = 1; // Start for Back test

EndYear = 2199; // Expired time -- Changeble

EndMonth = 12; // Expired time – Changeble

Setting for GBP/USD :

TakeProfit = 52.0; // Target per positions

Full Version Collection of HENRYFX-Secret

Pips = 50; // Step point to open next position

Setting for USD/JPY :

TakeProfit = 22.0; // Target per positions

Pips = 20; // Step point to open next position

Please use only for 1 Pair (GBPUSD Only or USD/JPY Only).

Recomended Brokers for this EA :

All Brokers with Micro Account (0,01 lot)

IKOFX (Start from \$1000, Laverage 1:500, use 0,1 lot).

Interbankfx (Start from \$1000, Laverage 1:200, use 0,01 lot).

FX-OPEN (Start from \$1000, Laverage 1:500, use 0,1 lot).

FX-CASH (Start from \$1000, Laverage 1:500, use 0,1 lot).

MasterForex (Start from \$1000, Laverage 1:500, use 0,1 lot).

EXPERT ADVISORS :

HENRYFX-EA

This EA the same kind with SMART-MFX EA, the only difference only LotIncreaseBy, this kind of difference of Martingale Settings...not double 200% but "Changable".

Please put the EA to :

C:/programfiles/metatrader/expert

This EA no need any indicator to trade, only 1 file EA and run.

The Parameters :

TakeProfit = 36; // Profit Goal for the latest order opened

Lots = 0.03; // First order will be for this lot size

InitialStop = 1000; // StopLoss

TrailingStop = 0; // Pips to trail the StopLoss

LotIncreaseBy = 1.8; //New orders will be the previous size times this amount

Pips=28; // Distance in Pips from one order to another

MaxTrades=10; // Maximum number of orders to open

SecureProfit=2; // If profit made is bigger than SecureProfit we close the orders

AccountProtection=0; // If one the account protection will be enabled, 0 is disabled

OrderstoProtect=3; // This number subtracted from MaxTrades is the number of open orders to enable the account protection.

// Example: (MaxTrades=10) minus (OrderstoProtect=3)=7 orders need to be open before account protection is enabled.

Magic = 123778; // Magic number for the orders placed

Time Frame : M5

Default Setting only for EUR/GBP

Setting for GBP/USD :

TakeProfit = 52.0; // Target per positions

Full Version Collection of HENRYFX-Secret

Pips = 50; // Step point to open next position

Setting for USD/JPY :

TakeProfit = 22.0; // Target per positions

Pips = 20; // Step point to open next position

Please use only for 1 Pair (GBPUSD Only or USD/JPY Only).

Recomended Brokers for this EA :

All Brokers with Micro Account (0,01 lot)

IKOFX (Start from \$1000, Lverage 1:500, use 0,1 lot).

Interbankfx (Start from \$1000, Lverage 1:200, use 0,01 lot).

FX-OPEN (Start from \$1000, Lverage 1:500, use 0,1 lot).

FX-CASH (Start from \$1000, Lverage 1:500, use 0,1 lot).

MasterForex (Start from \$1000, Lverage 1:500, use 0,1 lot).

EXPERT ADVISORS :

DOUBLE WINNING-EA

This EA will Open Double Position at the SAME PRICE, Combine with Martingale System for BUY and SELL Position, so the each position will close with profits.

This EA not Recomend for NFA Brokers, but you can use it for Europe Brokers, Cyprus Brokers, etc with no NFA Rules for Hedging.

Please put the EA to :

C:/programfiles/metatrader/expert

This EA no need any indicator to trade, only 1 file EA and run.

Time Frame M5

Parameters :

extern int Step=25; //step to open next position

extern double TP=35; // target pips for each position

extern double lot=0.01; // lot size, better max. 0,5% margin

extern string starttime="01:00"; // start trading with GMT

extern int nexttime=86400; // additional time after start trade (1800=30 minutes)

//// USD/JPY, Step=15, TP=15, Lot=0,02 (US1000), Start 23:00, miniaccount, Lverage 1:200

//// GBP/USD, Step=15, TP=15, Lot=0,02 (US1000), Start 23:00, miniaccount, Lverage 1:200

EXPERT ADVISORS :

HEDGE-WINNING100%-EA or HENRYWINNING100%-EA

This EA will Open ZIGZAG Position at the Hedging-PRICE, Combine with Martingale System for Hedging Position, so the each position will close with profits. This EA very POWERFULL for News Strategy.

Full Version Collection of HENRYFX-Secret

This EA not Recomend for NFA Brokers, but you can use it for Europe Brokers, Cyprus Brokers, etc with no NFA Rules for Hedging.

Please put the EA to :
C:/programfiles/metatrader/expert

This EA no need any indicator to trade, only 1 file EA and run.

Time Frame M5

Parameters :

TP=40; // Target Pips for profits
SL=80; // Stop Loss for each Positions Hedge.
Step=40; // Hedge Range to Open Oposite Position
Lot=0.1; // Start Lot
UseMM=1; // Money Mnagement
Multiplier=2; // Martingale Settings, let it default
starttime="03:00"; // Start Time to trade (Time Meta4)
nexttime=3600; // Additional time in second.
MA_Per=20; //Indicator to detect trend to open the first position.

EXPERT ADVISORS :

AUTOROBOT-EA

STEP ONE : INSTALATION EXPERT ADVISOR (ROBOTS).

=====

1. Move the file of AutorobotfxEA#3
c:/ ProgramFiles/ Tadawulfx Trader 4/ Expert....
2. Restart Your Meta4.
3. Then when the Meta4 active, Click on Navigator Bar.
4. On the left Window will show the Navigator Windows, then find the Expert Folder.
5. Double Click on Expert Folder in Navigator Windows, and will show the Autorobotfx#3 EA.
6. Right Click on that Expert, and will show the Expert Menu Windows, then Click on "Attach to a Chart" .
7. on "Common Tab", make (v) on Allow Live Trading, (v) Activ Signal, and (V) Allow DDL Import.
8. on "input tab", you can make some settings about this EA.

Please LET THIS SETTINGS with DEFAULT, and it will be FINE...!
JUST CHANGE THE LOT SETTINGS.

TimeFrame : M5

EntryTime = 21; // Time to start Trade
ExitTime = 2; // Time to end trade
Compound = true; // use mm
Risk = 20; // Risk for mm
Booster = 10.0; // lot booster size if compound = false

Full Version Collection of HENRYFX-Secret

Lots = 0.1; //lot size if compound = false
gi4 = 2218; // Expire years
gi5 = 12; // expire month
gi9 = 5; // Targets pips
gi12 = 5; // Maximum Open Position
gd5 = 4.0; // MAXimum Spread

==NOTES==

BONUS EXPERT ADVISORS from TSD:

ELECTRA-EA → Usefull

Electra EA ** Released to TSD Elite Members **

Hi, I will release another private EA, this is called Electra, we continue using Greek names.

This EA is a Multi-pair medium/long term Swing Trader. This is a positive Equity System, it mean the the equity remain in the positive side most of the time. Don't be tempted of halt and close the trades in profit, let the trends develop.

System History: Some time ago, I got the next history from Larry Williams.

The Farmer, the Gambler, and the Speculator.

There are only three or four rules to follow. Butyou and me we overdo the game.....and end up pouring money in, good after bad.

How come? What can we do about it ? At last weekend's seminar in Florida Jake Bernstein shared a very telling story. It goes like this:

Several years ago Jake was speaking to a brokerage firm gathering of farmers, ranchers and a few speculators. After his speech he was asked if he'd like to meet the one customer who made money. they said he wasn't very bright, but made money. Always.

The old farmer and Jake hit it off pretty well, so the gent asked Jake if he'd like to learn his system "Sure," Jake replied. "I'd like to see what you do."

With that, the crusty, aged trader opened up his chart of Pork Bellies and brought out a pendulum on a string....held it over the belly chart and advise Jake "If it swings up and Down on the page, I buy 'em.....if it swing cross ways I sell 'em. There it is, Jake, Now ya seen my system."

Full Version Collection of HENRYFX-Secret

Jake stepped back, thought for a minute, and then asked, "That's all, there's nothing else to it?"

"Mmmm," mumbled the market wizard. "There is one other thing, but it don't mean much, I think. If I got a loss at the end of the day, I get out of them things."

I mulled over this wisdom on the delayed flight home (a bomb threat forced us to switch to another airline) and while driving up I-5 listening to Country Western music a 1:15 AM heard-I mean really heard- Kenny Rogers' song "The Gambler" It struck me that everyone else has focused on his words, "Know when to hold them, know when to fold them"....but the real message I heard was in the refrain, "You gotta know what to throw away, know what to keep."

That dumb old farmer must have written Kenny's song. A gambler knows what to throw away....bad cards. Traders might want to listen to the farmer's and the gambler's work the next time they want to play speculator.

Larry Williams

After know this history, I coded an EA that simple locate any consolidation period (a flat period) and send a random order, but stop loses fast and ride the winners, I worked on almost all pairs !! as long you manage to stop the loses and ride the winners.

After too much testing I added an indicator to trade the H4 trend, I reduced the trade frequency, I added several Partial TP, to help during ranging markets, because when market is trending we don't need much help to make a profitable Swing or trend following system, even a random signal will do if you manage to stop loses but when markets are in ranging mode we get killed, our winners never are winners, they come back to get stopped.

The end result is Electra

Electra will Stop Loses fast and ride the winners. That's our only edge.

Trend direction doesn't matter, strong breaks or market crash are welcome, we only need a market that move on either side.

"Unlike most other trading systems Trend Follower does not depend on past performance and should work on every market. Its formulas are not based on pattern recognition and random selection of indicators, but rather a clean understanding and timing of the market.

Trend Follower is unique in that it doesn't attempt to predict the future but rather a tool that helps you to recognize the current trend and lets you go with the current flow."

The EA can ride winners for hundred and even thousand of pips taking partial profits along the way.

Full Version Collection of HENRYFX-Secret

Some swings can take months to develop, don't expect that this EA will open and close trades all day long, this is a low frequency Swing EA

The EA will open an order 4 times the lot size you set and will close it in four Partial Profits.

The EA have a sequence of 4 partial profit, because that, when your set the Lot size, the EA will multiply it by 4

if you set the lot to 0.1 the EA will open an order of 0.4 if you set to 0.2 the Ea will open an order of 0.8

To make it clear, there is not any Martingale or any dangerous cost averaging scheme in this logic, this is a scale-out logic.

The weak point of this system ? yes there is one, a prolonged ranging market without trends can drain the account.

This don't happened on the last 3 years but I don't know the future. Using the EA on many pairs will help to spread the risk, because some pairs can get stuck in a range but others will trend, we don't know what pair will trend in the future, because that is better to run the system on many pairs as possible independent of backtester results, only time will tell which pair will have nice trends or swings.

Market Crash of strong breaks, are our source of profit, you should not worry about suddenly breaks. The H4 trend is very fast to detect trends.

Use on any Timeframe, all the indicators have the timeframe hard coded, The signal used come from few MAs and Bar open, closed price, to basically open a trade during a consolidation or calm period in the direction of the last H4 trend.

There is not need to attach any additional indicator.

I attach the forward test and all the 3 years backtest with Alpari Data and the combined backtest results thanks to MTRreport 4.0

Last, this EA don't have problems of compatibility, if you want to use others EAs in the same account, you will not have problems, currently i complement this system with another private EA.

A breakout EA can be a nice complement for a very nice portfolio.

Electra 1.10 Update Added on 11/27/2007

The main change in this version is the addition of an Automatic MM and SL are now hidden

The MM used is a Turtle System MM.

The lot size is selected based on the pair volatility.

Full Version Collection of HENRYFX-Secret

Example EURGBP have a 20 days average dairy range of 38 pips but GBPJPY have a 20 days average dairy range of 339 pips, it mean that if we get a loss on GBPJPY and a winner on EUGBP, we will never cover that loss with that winner.

To equalize the trading size between different instruments Turtle traders use a Money volatility based position size.

This EA use ALL the rules of the turtle System MM, including the reduction of 10% of trading size after each 10% of account loss - 20% reduction -

Default risk is 0.5

To get a perfect lot size equalization with a 0.5 risk (default low risk) the absolute minimum is

\$2500 IBFX Mini, 25,000 IBFX Standard, 250,000 NF

To get a perfect lot size equalization with a 1 risk (medium risk) the absolute minimum is

\$1200 IBFX Mini, 12,000 IBFX Standard, 120,000 NF

To get a perfect lot size equalization with a 2 risk (High risk) the absolute minimum is

\$600 IBFX Mini, 6,000 IBFX Standard, 60,000 NF

This is a drop-in replacement of previous version, lot size doesn't matter at all, the Ea will handle all orders opened with a previous version and you can change risk setting on the fly even with opened orders.

Also we use a 20 days range for all the calculations, like in the turtle system.

Electra was updated to version 1.11 Added on 12/01/2007

Reason to update:

Bug fix:

Fix a zero divide error because of inconsistent or corrupted data history on some brokers (specially FXLQ and sometimes IBFX real mini accounts)

A routine of data check is implanted in the EA to avoid calculation process until data is loaded.

I use this system on live accounts but I don't encourage anyone to do it. If you want to use it live, do it at your risk, the most wise thing is forward test this system for many months or even years before go live.

Enjoy.

Disclaimer:
